

PRIVACY PARTITIONS

Architects and designers acknowledge that privacy is playing an increasingly vital role in washroom design. Bobrick answers these needs with privacy options on all of our toilet partitions.

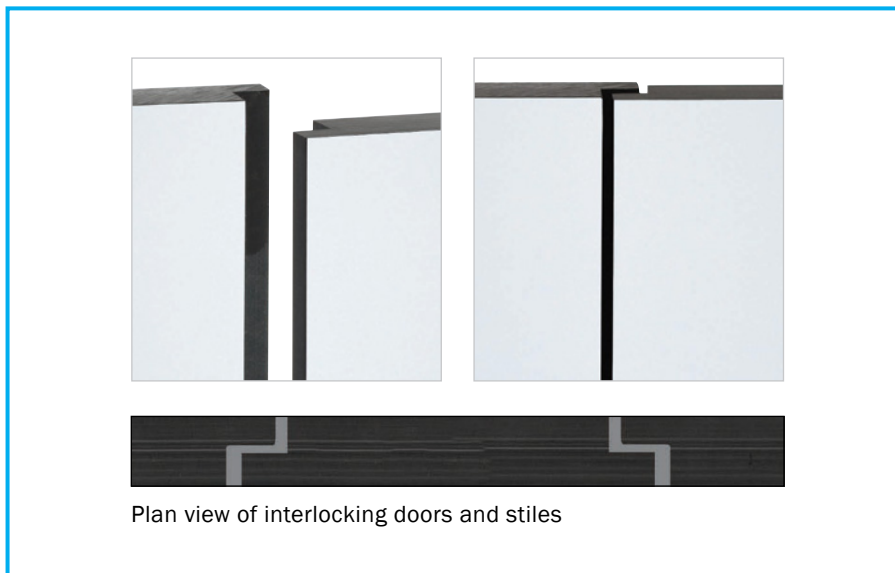

PRIVACY PROBLEMS

- Standard 12" (305 mm) floor clearances on partition doors.
- Gaps between doors and stiles found on typical toilet partitions.
- Door latch bolts that do not lock all the way causing doors to open unintentionally.

BOBRICK SOLUTION

- Bobrick partitions in all materials are available in standard 72" (1829 mm) tall doors and panels with 4-5/16" (110 mm) floor clearances. Other heights and floor clearances available upon request.
- Bobrick door hardware is designed for secure latching when installed properly - while maintaining the emergency access feature.
- Compact Laminate (CL) and Solid Core Reinforced Composite (SCRC) partitions feature an integrated Gap-Free Option to achieve no sightlines between doors and stiles. Interlocking doors and stiles are routed 0.300" (7.6 mm) from the edge to allow for 0.175" (4.4 mm) overlap.
