Our Commitment

Meeting the challenge of keeping buildings clean, safe and healthy is as important now as it has ever been. Utilizing over 100 years of cleaning industry experience and drawing on our long history of innovation, we have developed this Facility Cleaning Guide as a resource and tool for you to meet that challenge. Our extensive product offering, combined with the knowledge of the attributes of each product, allows us to break down application specific hard surface floor and vertical cleaning tasks into steps that are easy to follow.

Keeping it Simple

Every building needs to be cleaned. This Facility Supply Guide will help you understand which products will be most effective while, at the same time, keeping cleaning and labor costs to a minimum. Properly assessing any cleaning situation and successfully creating a cleaning program for each building will depend on the answer to these three basic questions:

1. Is cross-contamination a concern?
2. What is the size of the area to be cleaned?
3. Is the area to be cleaned considered a heavy soil (high traffic) or light soil (low traffic) application?

To properly clean a building for both appearance and health requires a mix of different products designed to fit each specific need. We offer the perfect blend of traditional dust mops, wet mops and microfiber products to handle any cleaning application. It's important to understand each product and when and where it should be used.

MIMA™ Microfiber products offer enhanced pick-up and deep cleaning characteristics that are excellent in smaller, light soil, "low traffic" areas and, in particular, areas in which cross-contamination is a concern. Various microfiber pads, in both cut and looped yarn, along with a large assortment of microfiber cloths, microfiber hardware, traditional style microfiber mops designed to fit existing hardware, and an assortment of microfiber accessory products, are available for effective cleaning.

Our traditional dust and wet mops are specifically designed to cover larger areas that typically involve a heavier soil load and are considered "high traffic." These conventional mops are designed to handle more soil over a larger cleaning area and are excellent in applications such as long hallways, gym floors, cafeterias and entrances to buildings.
