SoftWeave

A smooth luxurious feel and a natural, soft texture between your fingers. Marko SoftWeave table linens and napkins, made of spun filament polyester, deliver the soft feel of cotton, yet don't lint, pill, shrink, or fade like cotton. Thanks to an advanced finishing technology, our SoftWeave is able to remain elegant and soft to the touch longer than spun or 50/50 blended polyester. SoftWeave combines style and sophistication with the performance features and low cost efficiencies you desire. Our advanced stain release technology allows you to wash at a low 120°F rather than 160°F while using half the detergent, dramatically lowering your energy costs.

Perennial Classics

Our Perennial Classics line offers an easy way to buy ready-made linens at an economical price. The tablecloths and napkins are hefty and are made from soft, absorbent, spun polyester to resist shrinking and fading.

Napkins

Napkins offered in both our SoftWeave and Perennial Classic lines can be used to turn an ordinary dinner, or a "quick bite to eat" into a memorable meal or night on the town. Using cloth napkins can keep your customers coming back for more and for less than you think.

The Coldmaster Solution:

- High-impact ABS plastic holds up to foodservice use
- Exclusive refrigerant gel ensures high performance
Non-toxic gel receives a cold "charge" when frozen overnight, which enables it to keep your food cold throughout the day
- Extra insulation surrounds refrigerant gel for maximum cold retention
- Refrigerant gel is enclosed in a bag; prevents leaks, even if shell is damaged

Coldmaster line includes a full suite of **COLD RETENTION SOLUTIONS** such as 3 gallon ice-cream servers, condiment bars and industry firsts such as CoolCheck™ and Designer pans

- Exclusive refrigerant gel ensures **HIGH PERFORMANCE**
- **NON-TOXIC** gel receives a cold "charge" when frozen overnight, which enables it to keep your food cold throughout the day
- Extra insulation surrounds refrigerant gel for **MAXIMUM COLD RETENTION**

- Refrigerant gel is enclosed in a bag; **PREVENTS LEAKS**, even if shell is damaged, ensures 100% coverage, and helps keep it in place

VS.

Competitor

- Gel is not enclosed in a bag, less protection if there is a break
- Units must be stored upside down or food in the unit is not chilled at the top of the pan
- No additional insulation means that there is much less "chill time"
- Limited Assortment

CARLISLE
FOODSERVICE PRODUCTS

EFFICIENT
DURABLE
INNOVATIVE
SMART
**WARE-
WASHING
PRODUCTS**

Carlisle offers every rack, basket, and accessory you need for efficient warewashing operations. OptiClean™ is the industry standard for enabling clean, spotless ware. Our full line of color-coded rack extenders and Plaque-a-Rack are the ideal solution for sorting and managing your ware.

OPTICLEAN™

Engineered to Flow

Warewashing can be labor intensive. If not well managed, it is likely to hurt your operation's bottom line and add unnecessary frustration. However, labor and efficiency is not the operator's only problem. The quality of your warewashing could directly effects your customers' health and the reputation of your establishment. If an effective system of cleaning and sanitation is not upheld, you may be facing risks on a daily basis that could jeopardize the future of your business.

3-Component System

Base Rack // Open Extender // Divided Extender

By alternating open and divided extenders, each level of the rack offers heavy flow through of water for performance and thick divided walls for protection

Double-wall Construction

Maximum strength, protects contents from moving machine parts

Versatile Stacking

Stacking from either direction and with all major competitors

Open Wall Design

Open profile facilitates superior washing, complete rinsing, and fast drying

Quick Draining

No flat surfaces to trap water or loose food particles within the rack—ensuring rapid drying

4-way Tracking

Easy dish machine loading from any side without the need to rotate racks

Locking Extenders

Unique snap-on design allows for fast, simple assembly

Comfort Curve Handles

Comfort Curve Handles—molded into all four sides for easy handling, won't pinch fingers

All OptiClean Racks have an outside measurement of 19.75" x 19.75"

The Honeycomb

We've developed the most highly engineered warewashing solutions to improve your establishment's operational efficiency. Carlisle utilizes a tested geometric honeycomb structure, admired and studied since ancient times. The honeycomb design delivers unmatched durability while simultaneously increasing the flow of water through each rack. The open honeycomb design also eliminates flat surfaces and corners that would otherwise harbor food particles allowing water to drain and contents to dry quickly.

NeWave™

In pursuit of an even more efficient foodservice operation, we developed the OptiClean NeWave glass rack. These rounded wave design racks hold 20% more glasses than equivalent, square-compartment racks. This means more glasses in less racks, reduced chemical and/or water usage and improved labor efficiency. NeWave also holds glasses securely in place, resulting in minimal movement and reduced breakage.

Easy Identification

Water is not the only aspect we engineered to flow. A color-coded system allows operators to choose their own method of identification to categorize by the type of glass, location of wares within the facility, or even specific types of events. This color-coded system allows your operation to flow smoothly and eliminate unnecessary confusion for both existing and new employees.

Textured Finish

Non-slip textured finish on outside walls reduces scratches to keep racks looking new, improve durability, and provide a secure grip

WET MOPPING GUIDE

Use the guide below to help choose the right products for your floor care needs.

General Mopping

Choose mops with high absorbency, release and durability. If laundering facilities are available, it is beneficial to take advantage of launderable mops to save money. For performance and durability choose a synthetic blend or rayon mop with looped end and woven tailbands.

Yarn

- It is important to choose the right mop in order to get maximum efficiency
- Some yarns naturally perform specific cleaning tasks better than others

Yarn Ply

- Yarn ply is the number of strands twisted together to make a single yarn strand
- Although more plies give added strength, it does not always mean higher quality yarn
- More strands can add durability, but they decrease absorbency
- It is better & more cost effective to choose a higher quality yarn than a high ply, low quality yarn

Twist

- The “twist” of a yarn is a result of how tightly the fiber strands are wound together
- A tightly twisted yarn might have more strength & last longer, but it can have less absorbency
- The best choice is determined by the type & quality of the yarn, as well as the mop’s construction
- Mops with looped-end construction allow the yarn to have a loose twist without the fraying

Finish Mopping

For finish mopping applications look for a rayon or synthetic mop. These mops offer high absorbency and release. To make sure you are achieving maximum floor coverage with minimal streaking choose a tailband and looped end yarn.

	Advantages	Disadvantages	Use
Cotton	Good absorption & retention with limited shrinkage & a low initial cost.	Break-in period required. Slow drying yarn leads to mildew & deterioration. Lints.	Designed for general use. Scrubbing & cleaning up liquids.
Synthetic	Long stable fiber offers excellent tensile strength without linting.	Higher cost. Poor absorption.	Rough surfaces.
Cotton Synthetic Blend	Excellent choice for performance, price & durability. Synthetic fiber offers durability & color options.	Possible shrinkage.	Requested by professionals who require a better, longer lasting mop.
Rayon	Absorbs quickly with easy release. Dries fast & is mildew resistant. Cleaner yarn with less linting.	Shrinks when laundered and has less liquid retention.	Use for applying liquids such as disinfectant or floor finishes.

Cut-End Or Looped-End

Cut-End

- Cut-end mops are the most popular
- Low purchase price compared to looped end
- Cannot be laundered
- Cover less area per pass when mopping

Looped-End

- Superior performance & lasts longer than cut-end mops
- Launderable
- Tailband style gives better mopping coverage
- Looped-ends prevent fraying & unraveling so you can achieve reduced labor costs & replace mops less often
- Although the initial investment is more than a cut-end style, the life expectancy makes looped-end mops a more economical choice

How We Rate Our Mops

Absorbency

The absorbency of a mop refers to the ability to pick up and retain liquid. Higher levels allow faster floor drying times, leading to greater productivity and safety. Rayon and cotton yarns have the highest absorbency.

Durability

Mop durability is a measure of how long it will last or perform before needing replacement. Synthetic and blended mops are the most durable.

Release/Retention

Release is the ability of a mop to disperse liquid onto the floor or during wringing. Higher levels allow faster and more complete wringing, as well as more efficient application of cleaning solutions on the floor.

Launderability

The launderability is based on the number of washing cycles it can withstand before the construction of the mop is degraded. Synthetic and blended fiber mops have the highest levels of launderability.
